Why?

- PPTX SUCKS
- LATEX SUCKS
- PDF SUCKS

also:

terminal presentations
don't support images...

easy to use

depends on

Xlib

Xft

farbfeld

~1000 lines of code

usage:

```
$ sent FILE1 [FILE2 ...]
```

- ▶ one slide per paragraph
- ▶ lines starting with # are ignored
- ▶ image slide: paragraph containing @FILENAME
- ▶ empty slide: just use a \ as a paragraph

```
@this_line_actually_started_with_a_\.png  
#This line as well  
⇒ Prepend a backslash to kill behaviour of special characters
```

Images are handled in the
<http://tools.suckless.org/farbfeld/>
format internally.

sent also supports transparent images.
Try changing the background in config.h
and rebuild.

thanks.
